

AIRS RT model comparison

*R. Saunders with inputs from
V. Sherlock, A. Von Engeln, N. Bormann, S. Hannon, J-L Moncet, Y. Han, D.S. Turner*

Activity

- n Compare AIRS RT models
- n Compute BTs for all 2378 channels for 52 profiles
- n For some models compute jacobians for a selection of ~100 channels
- n Document run times
- n Complete by Jan 04

Participants and status

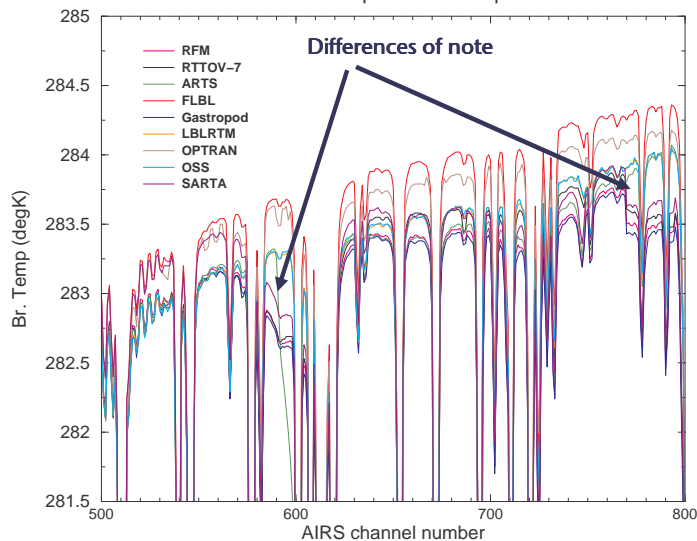

Model	Participant	Direct	Jacobian
RTTOV-7	R. Saunders, METO	Yes	Yes
Outtran†	Y. Han, NESDIS	Yes	Yes
OSS	J-L. Moncet, AER	Yes	No
LBLRTM	J-L. Moncet, AER	Yes	No
RFM	N. Bormann, ECMWF	Yes	Yes
Gastropod	V. Sherlock, NIWA	Yes	Yes
ARTS	A. VEngeln, Bremen	Yes	No
SARTA	S. Hannon, UMBC	Yes	No
NAST-I	W. Smith, NASA		
4A	S. Heilliette, LMD		
FLBL	D.S. Turner, MSC	Yes	
MSCFAST	L. Garand, MSC		
σ-IASI	C. Serio, Uni Bas		
Hartcode	F. Miskolczi, NASA		

†This is an experimental version of OPTRAN

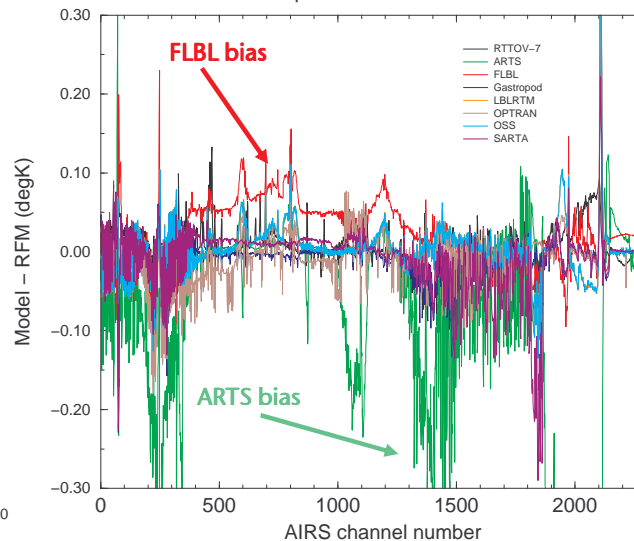

Initial results

- n To date have only compared direct calcs for 9 models who have submitted results
- n Used RFM as reference model (this may favour models based on GENLN2)
- n Bias and sdev plots shown of differences for each AIRS channel for 51 diverse profiles

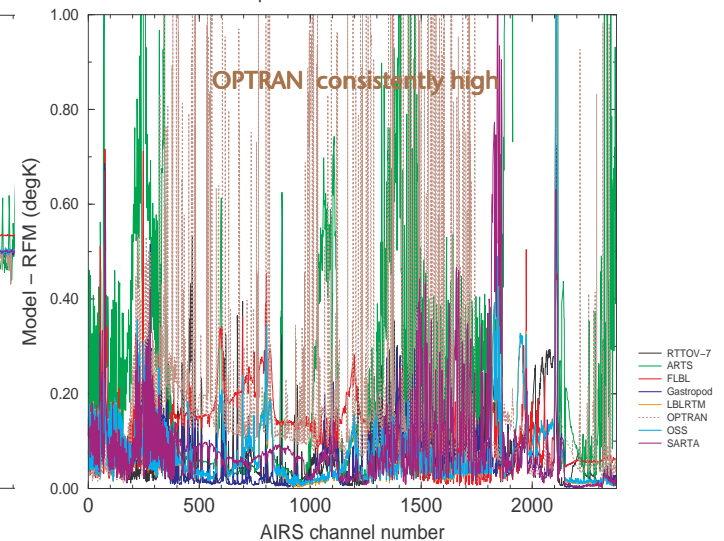

AIRS RT comparison mean profile

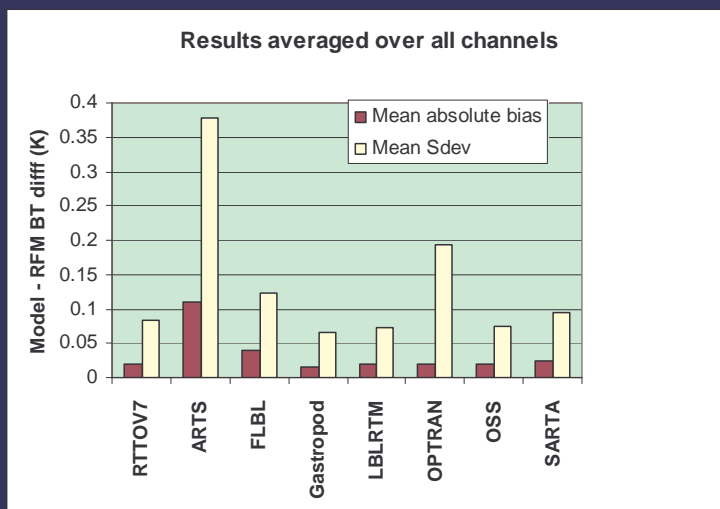

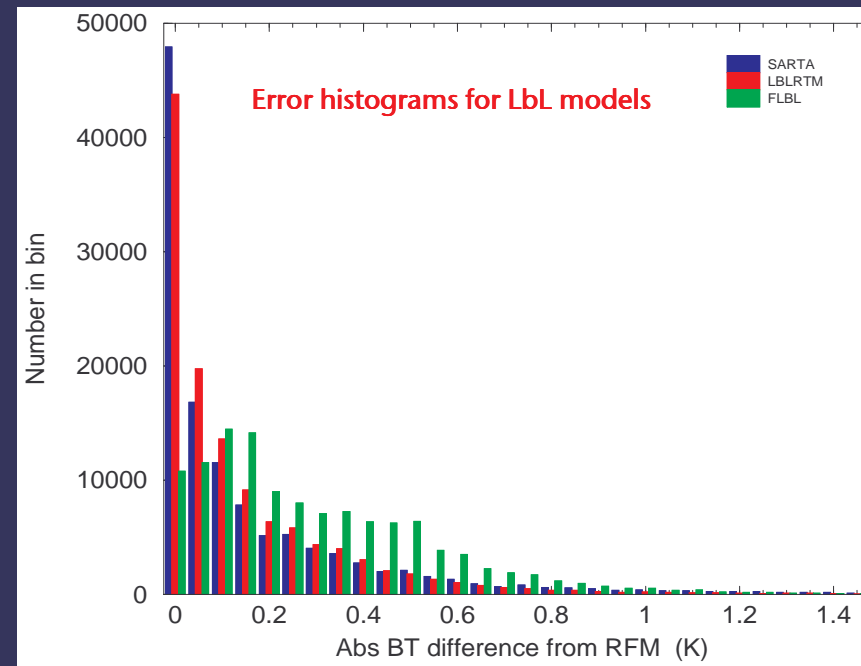

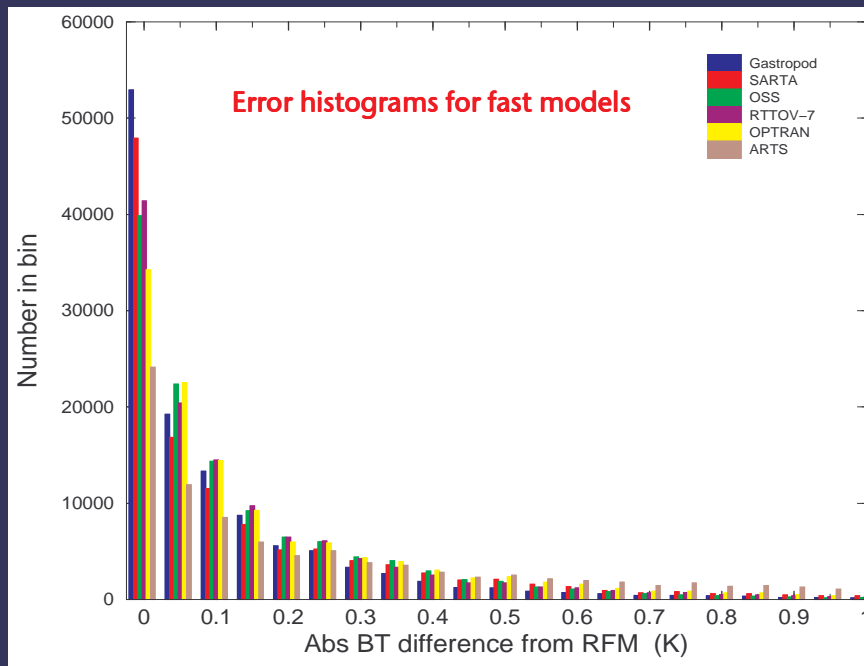

AIRS RT comparison mean radiance difference

AIRS RT comparison st dev of radiance difference

AIRS RT model comparison (2)

Summary

- Different models have mean differences ~0.1K in some spectral regions
- Some differences match those seen in LIE comparison
- In a few spectral regions differences can be up to 0.3K for some models
- Against RFM all fast models show a reasonable performance but there are differences
- No work done on Jacobian results yet
- More participants encouraged; Plan is to report in Spring 2004
