introduction

First, we gratefully acknowledge that the collection of data listed here would not have been possible without the cooperation of the Australia's Bureau of Meteorology. In addition this effort would not have been possible without funding from three sources, NSF (ATM-9209064), NASA (NAG 1-553) and USAF (F19628-91-K-0007). whose support is appreciated. Scores of people outside SSEC, as well as within, supported this work directly.

As shown in the table of contents, the data listings have been organized in nine sections. Each section contains only enough text to explain the table headings.

If experience warrants, a tenth section will be incorporated in updates containing comments and notes on data anomalies. Although the data were archived in two locations, lapses may prove to be highly correlated, since both obtained images from BOM Melbourne, and ingestor and navigation problems affected data at this common point.

Section 1

The sequence number incorporates time, date and other information to facilitate sorting of entries. It is not directly useful, but may be viewed as a catalog number. At SSEC, GMS image data are tagged with year (last two digits), day number of year (three digits), hour, minutes and seconds—all in UTC. Seconds are unnecessarily precise for cataloging purposes but can be determined for specific pixels in the image from the navigation software. Thus, the second and third columns list UTC year, day, hours and minutes. As a convenience, the Townsville date and local civil time corresponding to the given UTC values are shown in columns four and five. Tape name, column 7, is the label on the outside of the tape containing the specific data.

Section 2

GMS VISSR VIS 8 km Resolution Images Archived by SSEC in Madison

Column headings are the same as in Section 1. The sequence number incorporates time, date and other information to facilitate sorting of entries. It is not directly useful, but may be viewed as a catalog number. At SSEC, GMS image data are tagged with year (last two digits), day number of year (three digits), hour, minutes and seconds—all in UTC. Seconds are unnecessarily precise for cataloging purposes but can be determined for specific pixels in the image from the navigation software. Thus, the second and third columns list UTC year, day, hours and minutes. As a convenience, the Townsville date and local civil time corresponding to the given UTC values are shown in columns four and five. Tape name, column 7, is the label on the outside of the tape containing the specific data.

Seq. No.	UTC Year, Day	UTC Hour, Min	Townsville Date	Townsville Time	Tape Name
12	92 01	04 23	Nov 02	14 23	GMRV01

Section 3

Five Channel GAC Data Archived by SSEC in Madison

At SSEC, GMS image data are tagged with year (last two digits), day number of year (three digits), hour, minutes and seconds—all in UTC. Seconds are unnecessarily precise for cataloging purposes hence not shown in the tables. Thus, the second and third columns list UTC year, day, hours and minutes. As a convenience, the Townsville date and local civil time corresponding to the given UTC values are shown in columns four and five. Tape name, at the head of each table, is the label on the outside of the tape containing the specific data.

Tape Name	UTC Yr	UTC Day	UTC Hr	UTC Min	Townsville Date	Townsville Time
98-001	98	001	14	29	Jan 01	01:29

Section 4

NOAA-11, -12 Sounder Data Archived by SSEC in Madison

The sequence number incorporates time, date and other information to facilitate sorting of entries. It is not directly useful, but may be viewed as a catalog number. Because calibration differences (or other systematic differences) may exist between spacecraft instruments, the spacecraft is indicated in column 2. Column 3 is the number of radiance channels recorded. Nominal time of the pass is indicated in column four by year (last two digits), day number of year (three digits), hour, and minutes—all in UTC. As a convenience, the Townsville date and local civil time corresponding to the given UTC values are shown in column five. Tape name, column 6, is the label on the outside of the tape containing the specific data.

Section 7

Forecast Model Grids Archived by SSEC in Madison

As in other sections, the sequence number (column 1) is to facilitate sorting, not directly useful, except as a catalog number. Column 2 indicates the model producing the grids. In column 3 data are tagged with year (last two digits), day number of year (three digits) in UTC. As a convenience, the Townsville date is given in column 4. Run time according to local (Townsville) civil time is in column 5, while column 6 is run time UTC. Tape name, column 7, is the label on the outside of the tape containing the specific data.

Section 8

Images for TOGA/COARE Archived by SSEC in Townsville

As for images recorded in Madison, listed in earlier sections, column 1 (sequence number) incorporates information for sorting entries. The second and third columns list UTC year, day, hours and minutes. Unlike previous sections, because several image resolutions and coverages are mixed together on the same disks, this section describes more than one type of image, which is indicated briefly in column 4. As a convenience, the Townsville date and local civil time corresponding to the given UTC values are shown in columns five and six. Disk name, column 7, is the label on the outside of the magneto-optical disk containing the specific data, while side and file (or "area") complete the specification of the image's location on the disk.
